Research Interest

- Computer Vision and Deep Learning.
- Digital Humans, 3D Human Pose and Mesh Estimation.

Education

University of Trento (UniTn) *Italy*
Visiting student of MHUG, Advisor: Prof. Nicu Sebe 2023.07 – 2023.09

Peking University (PKU) *China*
Third-Year Master Student in Computer Science. Advisor: Prof. Hong Liu 2021.09 – 2024.06
Research Topics: 3D Human Pose and Shape Estimation, Action Recognition. GPA: 3.75 / 4.0

Nanjing University of Science and Technology (NJUST) *China*
Bachelor of Computer Science. GPA: 3.72 / 4.0 (Top 3%) 2017.09 – 2021.06

Projects Experience

Intelligent Unmanned Supermarket 2021.12 – Present

- Main Work: I am the leader of the customer-goods association module in this project, which enabling the association between customers and their purchased items in a unmanned supermarket. We design a multi-level discrimination logic to associate customers with their purchased items. When the system detects a product being taken, it analyzes the body position of the nearest customer by tracing back in time, selecting frames where the customer's body is close to the product and adding them to a candidate list. The product is assigned to the corresponding customer based on the priority order of different levels.

Visual Obstacle Avoidance based on Deep Reinforcement Learning 2020.10 – 2021.10

- Main Work: We present PER-D3QN, an end-to-end network architecture designed for visual obstacle avoidance in mobile robot. This architecture is a dueling architecture based deep double-Q network with prioritized experience reply. To evaluate our methodology, we construct indoor simulation environments using the Gazebo platform. We then utilize the Robot Operating System (ROS) communication mechanism to control the mobile robot's interactions within these environments. Using only continuous depth images, our model accurately predicts the actions required for effective obstacle avoidance by the mobile robot.

Facial Age Synthesis System 2019.06 – 2020.10

- Main Work: This project utilizes a GAN network to generate facial images corresponding to the target age label from input images. In addition to loss functions such as adversarial loss and reconstruction loss, semantic consistency loss is introduced to maintain the semantic information of the input face after domain transformation. Finally, we implemented a user-friendly facial age synthesis system.

Publication

- **Interweaved Graph and Attention Network for 3D Human Pose Estimation**

Invention Patent

- **A 3D Human Pose Estimation Method Based on Interweaved Graph and Attention Network.**
  Hong Liu, **Ti Wang**, Wenhao Li, Yingxuan You, Runwei Ding.
  Invention patent, Published Application Number: CN116129051A, 2023.

Competition

- **The Finalist Award** in Mathematical Contest in Modeling (**Top 1%**) 2020
- **First Prize** in Mathematics China Mathematical Modeling Network Challenge of Certification Cup 2020
- **First Prize** in China Undergraduate Mathematical Contest in Modeling, Jiangsu Division 2019
- **First Prize** in Advanced Mathematics Competition of Jiangsu Province 2018

Awards and Honors

- The Academic Excellence Award, *Peking University* 2022
- Outstanding Graduate, *NJUST* 2021
- The Dean's Medal of the Computer Science Department, *NJUST* 2021
- The First Prize Scholarship, *NJUST* (**Top 5%**) 2019-2021
- The Special Prize Scholarship, *NJUST* (**Top 1%**) 2018
- The Excellent Athlete, *NJUST* 2019
- The Merit Student, *NJUST* 2017-2020

Skills

- **Programming**: Python, Pytorch, C/C++, MATLAB, LaTeX.
- **Language**: Mandarin (Native), English.
- **Operating System**: Windows, Linux.
- **Hobbies**: Running, Half Marathon, Hiking, Swimming.
